

UltraGlide™ Upright Vacuums

Light-weight feel with heavy-duty performance.

Premium design and unsurpassed performance.

The UltraGlide™ Vacuums

With a handle-weight 12% lighter than the leading competitive upright vac, and a brush RPM nearly double the speed of the leading competitor's, your staff will vacuum faster and your carpets will be cleaner.

Easiest to Use

From the ease with which the vacuums move, to the remarkably lower sound level, the UltraGlide vacuums are designed with users in mind:

- Noticeably less strain on the operator's forearm and lower back from a handle-weight 12% lighter than the leading commercial-grade vacuum.
- Simply easier to push and pull with a fully enclosed, EZ-Grip™ ergonomic handle.
- Noise-sensitive environments are no longer off limits with a very low 69 dBA.
- Operators carry the vacuum from a low-center-of-gravity accu-balance front handle.

Often-used accessories like the crevice tool, dusting brush, and extra bag are within easy reach in the built-in tool-bay.

The only commercial vacuum in the industry with a long 49-foot safety-yellow cord that wraps in front—not in back—so changing the bag is easy.

Telescoping wand: whether high-surfaces or low crevices, the reach is easy.

Unsurpassed Performance

In addition to how clean a carpet looks, vacuum performance must also be measured by how much more productive your staff can be:

- With dynamically-balanced brushes spinning nearly twice the speed of the leading competitive vac, carpets don't just *look* cleaner, they *are* cleaner—faster.
- Bayblend™ housing on the base—protects the motor from the abuse of daily use, keeping the vacs up and running.
- Three-ply filter bags with optional HEPA filter: for premium indoor air quality.

Integrated Family Design

The savings from switching to the new UltraGlide vacuums start at day one with our integrated family design and continue for the life of the machine:

- Interchangeable parts across motor types reduce stocking time, storage costs, and inventory space translating into immediate, bottom-line savings.
- Even better, all parts are put through extreme real-life, continuous-use testing to ensure repair downtimes are a minimum and savings are at a maximum for the life of the vac.

Operator-fatigue is reduced and vacuum-time is increased from the innovative base-motor design: these vacs are simply easier and lighter to use.

Ideal Environments:

Hospitality—Hotel rooms, casinos, banquet halls, and auditoriums.

Education—Elementary, secondary, colleges and universities.

Healthcare—Hospitals, doctor's offices, nursing homes.

Retail—Large boxes and department stores.

Long-life, sealed bearings: much higher quality than standard bushings reducing downtimes.

Experience the new freedom in cleaning that comes from superior engineering.

UltraGlide Single Motor Vacuums:

- Better pick-up—and faster cleaning—with brush RPMs nearly twice as fast as the closest leading competitor's (4500 vs 2700 rpms).
- Push and pull with ease thanks to a handle weight 12% lighter than the leading competitor's.
- Simply one of the quietest vacuums in the industry with a low dBa of 69.

UltraGlide Dual Motor Vacuums:

- The dual motor handle weight is lightest in the industry with both brush and vacuum motors residing in the base of the machine.
- Maximum cleaning performance from dual motors continuously performing separate, focused tasks: brush drive at optimal 5000 rpm and vac motor at optimal performance.

	Single Motor		Dual Motor		
	UltraGlide (12")	UltraGlide (15")	UltraGlide (12")	UltraGlide (15")	UltraGlide (18")
Cleaning Path	12 in.	15 in.	12 in.	15 in.	18 in.
