

100 Series

Large Character Inkjet Printers

- Quick, Easy Installation
- Drip Free Ink Supply
- Simple Keypad
- Optimized print quality
- Font Selection from .5", .75" and .75" bold for Model 107 or 1.75", 1.5", 1.25", and .9" for Model 116.

The ID Technology 100 Series of large character inkjet printing systems offers economical, user friendly, compact solutions to alphanumeric case coding.

These printers are ready to go, right out of the box. The printer only needs an AC power source and it is ready to print – even the product detector is built-in. The versatile, hand-adjustable, mounting bracket attaches easily to any conveyor or case sealer. The units can even be moved from line to line with ease.

The non-CFC pressurized ink cartridge snaps in place to eliminate messy ink spills and assure complete ink consumption for economical, environmentally friendly operation.

The user-friendly keypad has a four-line, sixteen characters per line, LCD display and multi-lingual prompts, allowing easy data entry and message editing. Ink droplet size is easily programmed from the keypad to adjust for substrate variations.

Large Character Inkjet Printer

STANDARD FEATURES

- Sequential numbering up to 32 digits
- Message storage: 50 messages up to 32 characters each
- Programmable print delay
- Production counting
- Variable date coding formats
- Variable time coding formats
- Special characters

ENVIRONMENTAL
